

FILTAN SC

Slipping agent

COMPOSITION

Blend of organic and inorganic products

APPEARANCE

White powder

pH VALUE (1:10)

5,5 +/- 0,5

DRY RESIDUE

≥ 98%

FILTAN SC is particularly used in the production phases where the possibility of surface rubbing is greater with a consequent possible damage of the grain of the leather.

FILTAN SC is used to avoid leathers from knotting in the tanning drums, particularly in the production of small size, thin leathers, bellies and reptiles.

The percentages of usage varies from 0,2-1,5% calculated on the weight of the leather depending on the ratio bath/leather of the used process.

Storage: 6 – 12 months. Keep the product in intact, well closed original packaging, in cool and dry place, away from heat sources. Close the container tightly after use.
